DS 100

Final Github DS 100 Report

I was interested in taking DS 100 because I believe that in starting out in this new program degree that first learning about what technology is and how it works is a start. Technology has an impact on how people communicate, learn, and think. It benefits society and impacts how people relate to one another on a regular basis. Today's civilization is significantly influenced by technology. It affects people's daily lives and has both positive and harmful consequences on the planet. Modern times are influenced by frequent technological advancements. Examples include the internet and mobile phones. At this time in generation, I think that it is not possible to live a lifestyle without technology because we rely on technology for numerous things such as searching up what we don't understand to using technology to videocall family from around the globe. I think that the next era of technology based on what I have been seeing is AI because the people behind making AI technology is improving there codes and are really trying to make it more useful and assessable to the real world.
